

MediNotes e Feature Summary

- ♦ *HIPAA Certified*
- ♦ *Custom HPI and Chief Complaints*
- ♦ *Preventive Medicine*
- ♦ *Last Results/Pull Forward*
 - *Data from previous exams or the front screen can be pulled into a new note*
- ♦ *Structured/Codified Data*
 - *ICD-9 and CPT™ coding from the AMA*
- ♦ *Graphic “point-and-click” design*
- ♦ *Designed with the physician in mind*
- ♦ *Efficient electronic workflow*
- ♦ *Annotation images can be embedded in the patient’s note*
- ♦ *Instant accessibility to any patient’s medical records*
- ♦ *Objects can be specified as “required”*
- ♦ *Organized and legible charts*
- ♦ *ROI in 6-12 months*
- ♦ *Wireless Enabled*
- ♦ *Tablet PC Enabled*
- ♦ *Text entry via Speech Recognition software*
- ♦ *Two-way interface with HorizonMIS™ Practice Management System*
- ♦ *Patient Summary*
 - *Give at a glance overview*
 - *Can be printed for a referral*
- ♦ *Growth Charts graphically show the patient’s growth progress*
- ♦ *Reliable and secure SQL relational database*
- ♦ *Secure intra-office messaging*
- ♦ *Integrated with many systems*
 - *IMPACT.MD document management*
 - *AppointmentsPRO scheduling*
 - *MedCom laboratory software*
- ♦ *Immunization History*
- ♦ *Clinical Alerts*

MediNotes e electronic health record is effective

The flexible template design allows users to specify exactly what they want in their note and then utilize a structured outline each time they perform that exam.

HIPAA Certified Electronic Health Record

MediNotes e Electronic health record has been certified for HIPAA through a third-party consultant for all aspects pertaining to electronic medical records.

Doctors choose our software; doctors use our software

Software does not impact the bottom line of your practice unless it is taken out of the box and used. MediNotes e Electronic health record is the electronic health record that physicians buy for themselves to help manage their practice.

Flexible

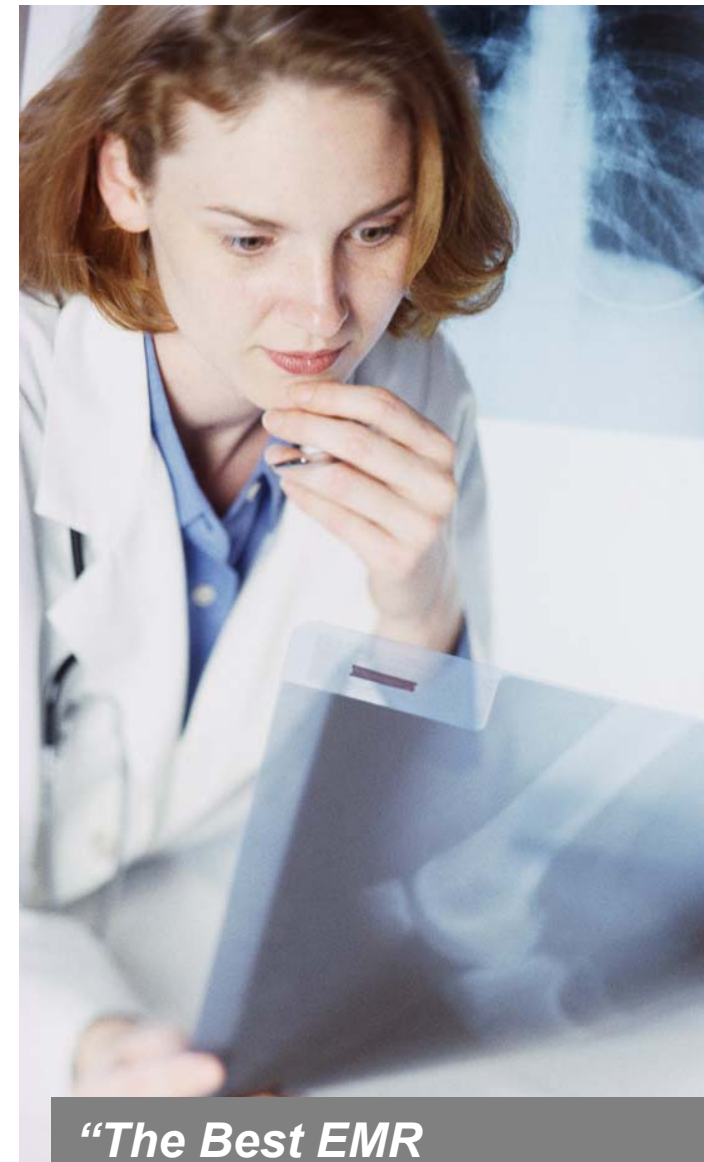

MediNotes e Electronic health record is one of the most flexible Electronic Health Record packages on the market today. Templates and other medical content objects have been designed for complete control by the physician.

We listen to our clients

Many of our new features start as ideas from present customers. Some are just little tweaks to improve efficiency, while others are completely new feature concepts that add to the overall design of the electronic medical record.

Best Electronic Health Record Value on the Market

A better electronic health record value is hard to find. We have the features that will make your practice more efficient at a price that any practice, large or small, should be able to swallow. Most clients see a return on their investment within 6-12 months of implementation.

**“The Best EMR
Value on the Market”**

MediNotes e
Electronic Medical Records

From the initial release, our designers set a daunting goal for MediNotes e. To create a comprehensive clinical software package with a robust library of medical information, and an intuitive interface that can be used quickly and effectively by physicians and staff. The program had to satisfy the demanding needs of hospitals and universities, yet remain intuitive and refined for small practice settings. Sound impossible?

The result is MediNotes e, an innovative and effective electronic medical record product for specialty and general medicine. MediNotes e includes the features that you would expect to find in systems many times the price. Despite the tremendous power and advanced features, MediNotes e is surprisingly easy to use.

MediNotes e with a two-way interface with HorizonMIS™ gives you the 'Best of Breed' solution. Demographic information flows from HorizonMIS™ to MediNotes e and the coding information flows from MediNotes e to HorizonMIS™.

It is possible!

Workflow

- Role-based licenses ensure that only authorized users can view patient data.
- Referral letters and patient instructions can be completed and printed in just a few mouse-clicks.
- Chart by exception using the MediNotes e symptom or diagnosis based templates.

Risk Management

- HIPAA Certified by national HIPAA experts.
- Prepare accurate and comprehensive documentation to support all of your examinations and procedures.
- Password protection, one key locking and profile-based program access ensure that only medical personnel have access to your records.

Profitability

- Eliminate the need for your transcriptionist.
- MediNotes e billing codes come right from the documentation to assure that the codes are proper. Reduce the administrative overhead necessary to run your practice.
- The E&M Wizard suggests the proper E&M coding level based on the history and examination stated in the note.
- Studies indicate that pulling charts costs between \$6-\$8 per chart. Imagine eliminating this step and accessing records instantly through MediNotes e.

WHY MediNotes e?

Intensified legislation and bureaucracy have increased the amount of paperwork necessary to practice medicine, and in turn has transformed many physicians into paper-pushers instead of healers. This fragments the role of the physician to: care giver, practice manager, bill collector, coding expert, and transcriptionist.

MediNotes e can't cut all of the bureaucratic red tape, but it can help your practice be successful with: Increased Profitability, Improved Workflow and Risk Management. With MediNotes e in place, you'll spend less time working with your transcriptionist and staff on the details of your notes and more time with your patients. Your records will be more detailed and accurate than ever before. Important medical information will be instantly accessible: available any time, anywhere through your network conduit. But most of all, your additional roles slip away leaving you free to focus your attention on the one detail that matters the most to your practice—the patient.
